

## **Solutions for blistered medications**

Aids for the storage and distribution of blistered medications in hospitals and care homes

## Your expert for medication solutions

Wiegand has been developing convincing solutions for supplies and medication logistics for over 45 years. We offer tailor-made solutions - from central storage to the furnishing and equipping of ward rooms and pharmacies to the individual distribution of medicines at the patient's bedside. Wiegand does not offer standard solutions, but the right solution for every requirement.

### Optimal storage and distribution of blistered medicines

The externally supplied and blistered medication significantly reduces the workload for the nursing staff. The challenge comes in the storage and delivery of the medication in blister rolls to the residents. Wiegand offers you a comprehensive range of aids to simplify these processes.

Wiegand's blister trolleys are tailored to the medication process with medication blisters and offer space for blister rolls as well as for additional medications such as creams, drops and supplementary materials.

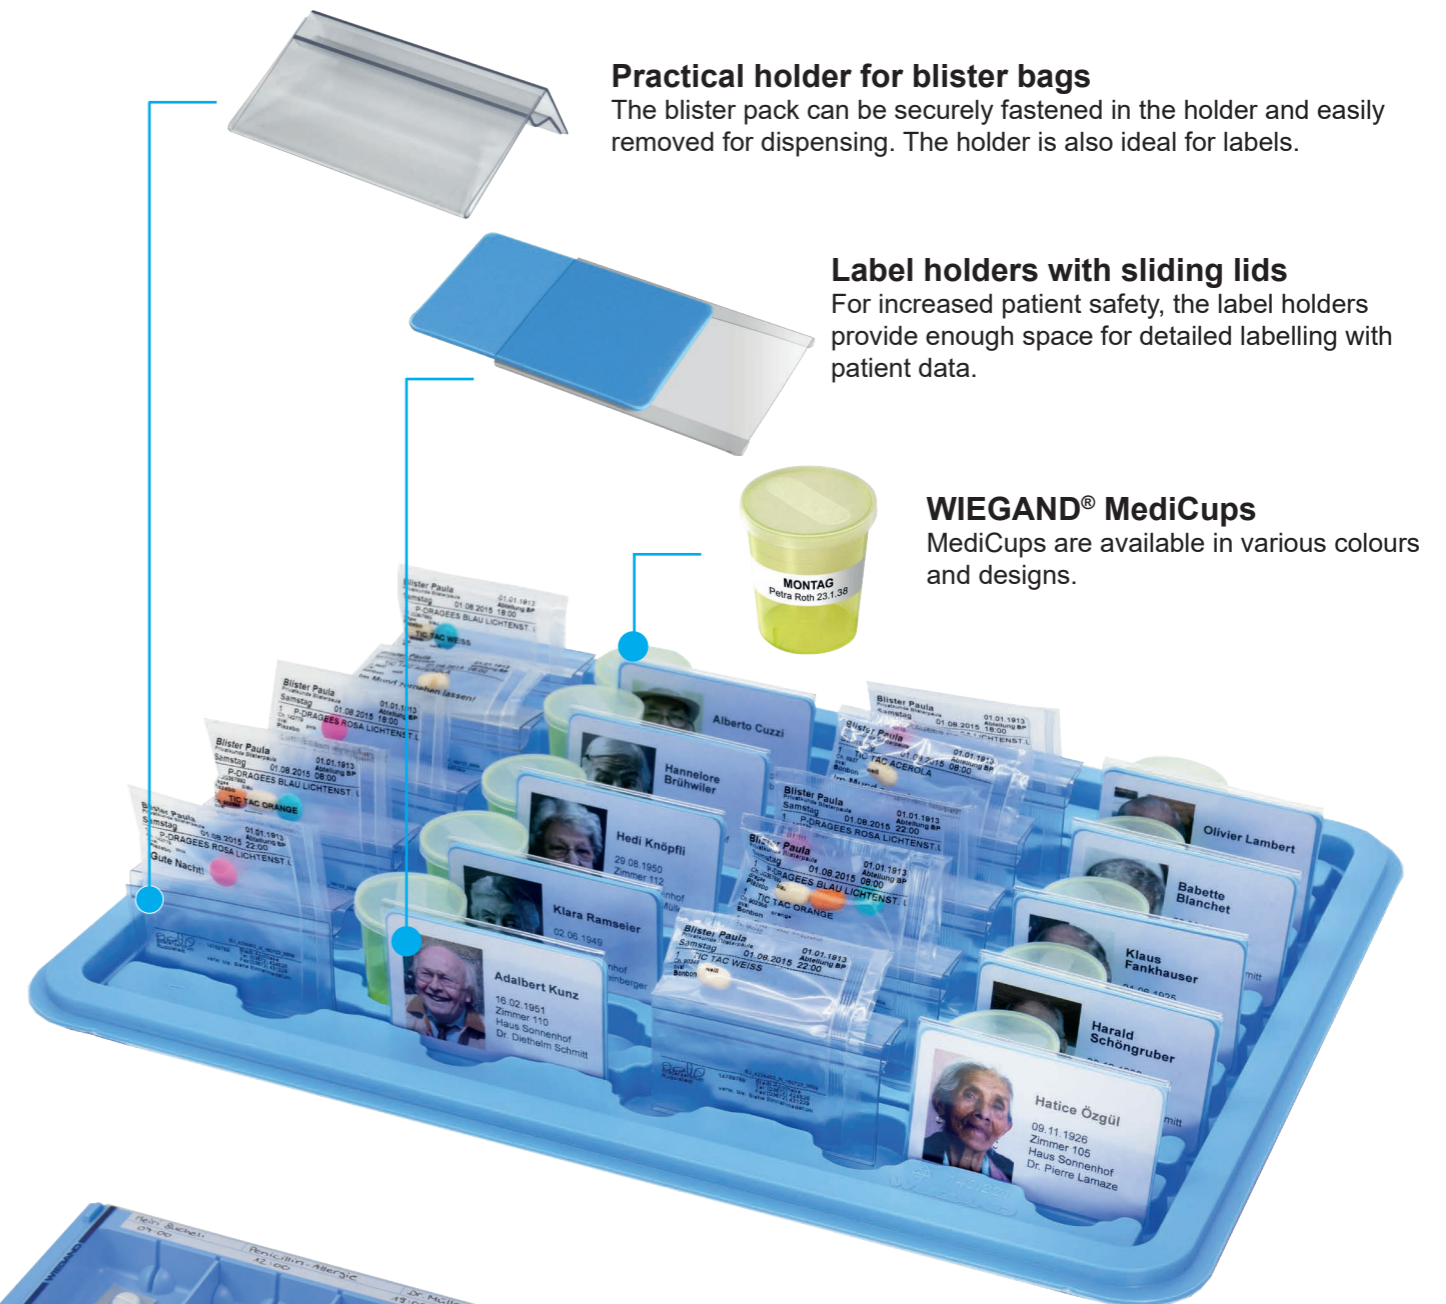

### Swiss quality products

As a family business, Wiegand will continue to rely on Switzerland as a production location in the future. The FlexLine trolleys are manufactured in the company's own production facility. Each FlexLine trolley is individually manufactured for you from high-quality and durable materials.

## Easy storage, arrangement and distribution of blistered medicines

Wiegand offers a diverse range of aids for the storage and distribution of blistered medicines. Wiegand products simplify workflows and help to increase patient safety. The Wiegand system supports the distribution of blistered and other medicines in a simple, practical, and safe way.

### Practical holder for blister bags

The blister pack can be securely fastened in the holder and easily removed for dispensing. The holder is also ideal for labels.

### Label holders with sliding lids

For increased patient safety, the label holders provide enough space for detailed labelling with patient data.

### WIEGAND® MediCups

MediCups are available in various colours and designs.

### WIEGAND® MediDispenser

WIEGAND® MediDispensers are ideal for storing reserve or additional medications. MediDispensers can also be used when therapies are changed or are not yet available in packet strip blisters.

### Dispenser Marker

The Dispenser Marker is a permanent ink pen with special eraser. The fine tip is suitable for writing on medicine dispensers, medicine cups, medicine containers and labels.

# WIEGAND® Starter-sets blistering

The starter sets support the distribution process of blistered pills in blister packs. The set includes one label holder per resident, a practical holder for the blister pack and a MediCup for dispensing the de-blistered pills. The necessary patient data and the patient picture can be printed on the enclosed labels and the labels can be stuck on the label holders provided. This increases medication safety, as an additional visual check can take place through the patient picture. The enclosed MediDispenser can be used for the medication of new patients.

## Description

# Storage and distribution of medication in blister packs

Blistering is a variant of external preparation. This involves the mechanical preparation of prescribed tablets by a blister machine or device. The blister packs can be easily integrated into existing Wiegand distribution systems.

The hygienic and durable Wiegand BlisterBoxes store a patient's blister pack for one or two weeks and can be easily unrolled and detached.

**Description** **BlisterBox duro**

# WIEGAND® blister trolleys

The Wiegand blister trolleys were configured together with specialists to suit the processes. The medication process with blistered medications requires certain working aids that make the process more efficient. The trolleys were equipped according to the needs of the professionals and can ideally support the work processes.

## Wiegand's blister trolleys fulfil important criteria:

- Space-saving, hygienic and safe storage of medicines blistered in blister rolls
- Storage possibilities for additional medications and supplementary material
- Efficient, safe distribution and dispensing
- Time saving for the nursing staff, due to reduction of walking distances

## Trolley for storage and distribution of card blisters

The Wiegand trolleys are also suitable for supporting medication processes that are implemented with blister cards. Thanks to the FlexLine system, it is possible to respond to individual needs and adapt the trolley.

Contact us for an individual consultation to configure the ideal trolley for your work process.

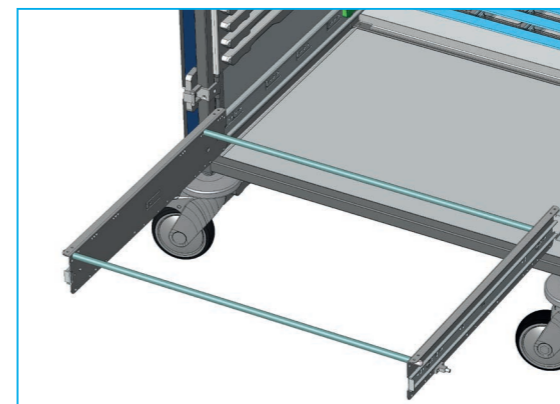

# WIEGAND® FlexLine system

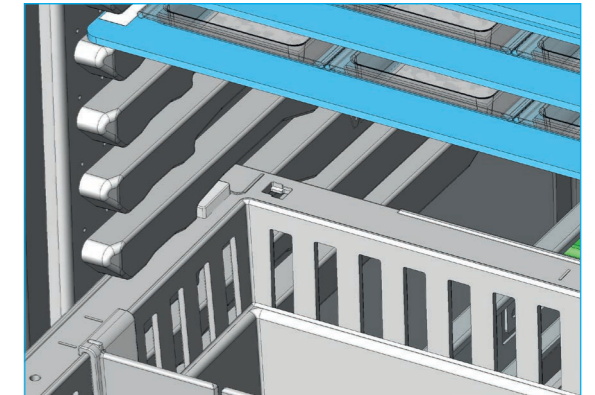

To tailor the blister trolley exactly to your needs, Wiegand offers you a high level of flexibility with the FlexLine system. Blister trolleys, like all other trolleys from Wiegand, can be individually configured thanks to our wide range of accessories and optimally adapted to your requirement.

## Different variations available

- Wiegand blister trolleys are available in two widths: 45cm or 60cm
- Side panels or extraction frames
- Laterally extendable work surface
- Additional shelves as storage space
- Various locking systems available
- Can be equipped with various accessories

Extraction frames for the fixed use of modules in the trolley

Side panels allow more flexible use of the trolley

## Trolley colours

Whether you want to work with uniform colour codes or follow a specific furnishing concept - Wiegand offers you a diverse selection of trolley colours. The fronts of the drawers and doors are available in the following 10 standard colours at no extra charge:

0717 Atlantic

0718 Arctis

0024 Vivo

0725 Yellow-green

2124 Camomilla

0010 Mango

0011 Mandarin

0067 Red

0021 Mona Lisa

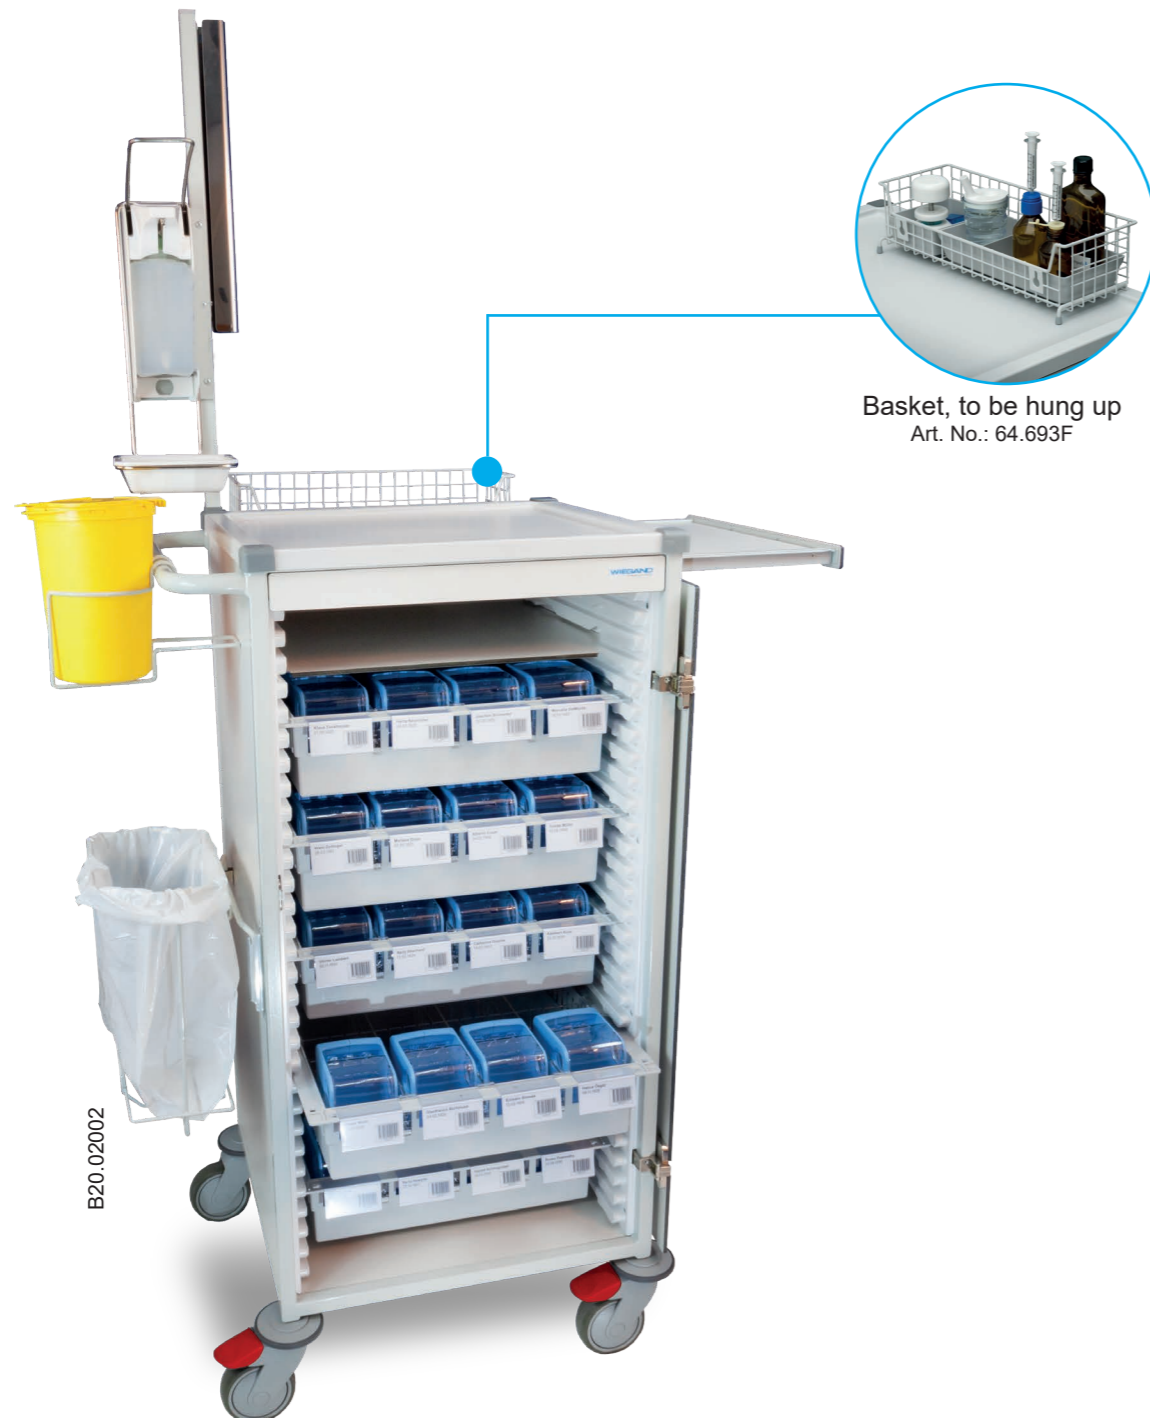

0742 White

# The most popular blister trolleys

## Blister trolley 20 residents

- 45 cm wide blister trolley with side panels
- Suitable for FlexModul trays 450x400x100 mm

**Alternative** 1031.20 (The precondition is a locking plan)

## Cabinet for the storage of medicines and consumables

The storage of medicines and consumables in cabinets can - depending on the structural conditions - be used efficiently and offers various advantages for the organisation of the medication process. Our expert staff will accompany you on the way from planning to installation and will be at your side as a partner.

### Efficient organisation ensures order in the medicine cabinets

Arrange your medicine cabinet in a space-saving and clear way. You can store the blister packet strips in the practical and hygienic BlisterBoxes and place the additional and reserve medication in FlexModul trays or TRESTON containers. Choose the ideal solution for your medication process.

### TRESTON container
